

# PRICE DISPLAYS

## ACCESSORIES

**Control Box**

### Electronic Price Control

Inno-Sign Price Displays are equipped with electronic price control to change prices from a central head office or a local kiosk using either a manual control box via underground cables or wireless RF-modem or automatically when connected directly to the pump site controller.

**IR Remote Control**

### IR Remote Control

A low cost solution operated from the base of the price pole. Maximum operation distance is 5m. Can control 4 different Prices. Only for LED displays.

**Interface Box**

### Control Box

Manual price settings from the base of the sign or from the kiosk via underground cables or wireless connection. LCD display show prices on the panel and stores the settings.

**Data Connection Box**

### Interface Box

Inno-Sign can interface with the full range of protocols such as IFSF LON, Dresser Wayne, Doms, Autotank, System Marketer and Tokheim.

**Inno-Link**

### Combi Controller

Power Supply, Signcontroller, Databox and power distribution are combined in one unit, to reduce overall cost and simplify the installation. The Box is protected in a ventilated aluminium Case.

**Combi Controller**

### Inno-Link wireless

The Inno-Sign wireless INNO-LINK system comprises of a master transmitter unit in the building and a slave receiver in the price sign or price signs. It avoids the expense and disruption of installing an underground cable. It provides interference-free wireless communication up to 300m line-of-sight. The transmitter is powered directly from the mains and it also provides power to the price sign Control Box.
